Evaluate transit data from the entire GI tract with one test.
25-40% of the general population suffers from functional gastrointestinal (GI) symptoms, accounting for up to 40% of GI office consultations. Often, patients presenting with functional GI symptoms have evidence of diffuse GI motility disorders. Upper and lower GI symptoms frequently overlap. Signs of gastroparesis and chronic constipation are often confused with symptoms from conditions such as IBS and functional dyspepsia. For this reason, localizing transit abnormalities to a specific GI region is important in the diagnostic evaluation and should be done early in the process to guide appropriate therapy.

The SmartPill motility procedure can help. SmartPill is an ingestible capsule that measures pressure, pH, transit time and temperature as it passes through the entire GI tract. While the SmartPill test is not indicated for the diagnosis of IBS or functional dyspepsia, it can help rule out other conditions.

**SmartPill benefits your patients:**
- Improves comfort vs. existing diagnostic tests
- Eliminates radiation exposure
- Minimizes patient down-time
- Can improve patient symptoms by providing direction for therapy

*Image: Evaluate unexplained GI symptoms with one test.*
SmartPill benefits your practice:

• The only motility test that provides a complete transit profile of the GI tract
• Sensor-based capsule eliminates multiple tests
• Offers increased sensitivity compared to Gastric Emptying Scintigraphy (GES) and Radio Opaque Markers (ROM)\(^6\)
• Localizes abnormalities to specific regions of the GI tract in the presence of overlapping motility symptoms\(^5\)
• Standardizes the motility testing process with benchmarked results

SmartPill uses MotiliGI\(^\text{TM}\) software to display and analyze the data, providing test results in both graphical and report formats. SmartPill provides valuable diagnostic information including:

• Gastric emptying time
• Small bowel transit time
• Colonic transit time
• Whole gut transit time
• Pressure patterns from the antrum and duodenum

Results are used for the evaluation of gastroparesis and chronic constipation.

SmartPill motility monitoring system

The SmartPill motility monitoring system offers a unique way to assess motility by collecting and analyzing data from within the entire GI tract.

• SmartBar\(^\text{TM}\) meal standardizes the procedure\(^7\)
• SmartPill is an ingestible capsule that measures pressure, pH and temperature
• User downloads patient data from the recorder within minutes
• Test Analysis Wizard in MotiliGI software guides user through the data analysis
